

Purpose of the Document

This document summarizes and describes the most important features of **NETLINE OPSLINK** system.

Creation Date

01/02/2022 Document Creation – V.0.0

Revision

1. NetLine OpsLink Introduction

NetLine OpsLink allows you to securely access all operational data in NetLine Ops++ via the Web. Any blue data is underlined present in the Opslink pages and is clickable and refers to other information present in the system.

2. Netline OPSlink- Login

To access OPSLink, copy the following address into your browser inside ITA network:

<http://azrpapf005.user.alitalia.local:8180/opslink/>

Or following address into your browser outside ITA network using Internet:

<http://opslink.alitalia.it/opslink/>

The following WEB page will open:

NetLine/Ops++ OpsLink

UTC: 12:42:16

3. NetLine OpsLink Home Page

The following items can be selected on the Home Page:

- Arrivals
- Departures
- Turnarounds
- Legs
- Checks
- Movements (only for Ground Staff)
- Airports
- Aircraft
- Help

4. NetLine OpsLink Access

By selecting each single item, the system will ask for the login credentials. Enter the Company ID in Username and the password for accessing the network in Password field. Access to the individual menu items depends on the authorization profile assigned to the individual user.

5. NetLine OpsLink Arrivals

Arrivals lists the aircraft arriving at a given airport in a given time range. After selecting arrivals and logging in, the following window opens, where you can enter:

- ❖ *Airport* (IATA code)
- ❖ *Date & Time* of arrival
- ❖ *Interval* (Time interval in hours for the arriving legs 2 hours will is the default)
- ❖ *Carrier(s)* (Several comma separated carriers may be defined)
- ❖ *Service Type* (the option extends the selection criteria to include maintenance events in the result set)
- ❖ *Query Type* (query against actual times taking delays into account for leg selection.)

Buttons

- Find* – Executes the arrival query according to the given conditions.
- Reset* – Clears the contents of the input conditions.
- Print* – Print the leg list according to your current printer setting.

In case of a successful search the list of the found arriving legs will be displayed:

Arrivals

Airport	LIN	Date & Time	05Jan22 (DDMMYY)	12	10 (hhmm)	Interval	2 Hours	Find
Carrier(s)							Reset	
Service Type	<input checked="" type="checkbox"/> Include checks						Print	
Query Type	<input checked="" type="checkbox"/> Query by Actual times							

	Flight	Date	ST	State	STA	Best AT	From	Reg.	Own / Sub	Delay	Position / Gate	Pax(F/C/Y)
1	AZ229	05Jan	J	ARR	05Jan 12:20	05Jan 12:14 A	LHR	EIDTA	AZ / 32S	32 / 89 //	-/-	6/0/32

5	AZ1288	05Jan	J	ARR	05Jan 13:10	05Jan 13:01 A	NAP	EIIMW	AZ / 319	///	-/-	0/0/54
6	AZ1640	05Jan	J	DEP	05Jan 13:55	05Jan 13:45 E	BRI	EIIMB	AZ / 319	///	-/-	0/0/66

If a displayed leg does not arrive as scheduled at the selected airport (due for example to a return to ramp or forced return), then the “Best At” field will display the string “XXXxx XX:XX X”.

Links:

The list can be sorted by each column by clicking on the column name.

By clicking on a flight link (column name: FLIGHT) all the attributes of the selected leg will be displayed

By clicking on a service type (column name: ST) the description of the selected service type will be displayed in a user information dialog.

By clicking on a state (column name: STATE) the description of the selected leg state will be displayed in a user information dialog.

By clicking on an airport link (column name: FROM) all the attributes of the selected airport will be displayed.

By clicking on a registration link (column name: REG.) all the attributes of the selected aircraft will be displayed.

By clicking on a delay link (column name: DELAY) the description of the selected delay will be displayed in a user information dialog.

6. NetLine OpsLink Departures

The departures display shows the legs departing at a given airport in a time range. After selecting departures and logging in, the following window opens, where you can enter:

- ❖ *Airport* (IATA code)
- ❖ *Date & Time* of departures
- ❖ *Interval* (Time interval in hours for the departing legs 2 hours will is the default)
- ❖ *Carrier(s)* (Several comma separated carriers may be defined)
- ❖ *Service Type* (the option extends the selection criteria to include maintenance events in the result set)
- ❖ *Query Type* (query against actual times taking delays into account for leg selection.)

Buttons

- Find* – Executes the departure query according to the given conditions.
- Reset* – Clears the contents of the input conditions.
- Print* – Print the leg list according to your current printer setting.

In case of a successful search the list of the found departing legs will be displayed:

Departures

Airport	FCO	Date & Time	05Jan22	(DDMMYY)	10	00	(hhmm)	Interval	3	Hours
Carrier(s)	AZ									
Service Type	<input type="checkbox"/> Include checks <input checked="" type="checkbox"/> Query by Actual times

If a displayed leg does not fly to the scheduled destination then you will see two airport codes displayed in the “To” column. The first code will be the scheduled airport and the second one will be the airport to which the aircraft is diverted.

Links:

All the defined links on the page are the same as listed in section Arrivals - Links

7. NetLine OpsLink Turnarounds

The Turnaround list shows aircraft turnarounds or transits at a selected airport. Each turnaround is shown as a combination of arrival leg, (optional) ground event and departure leg. After selecting turnarounds and logging in, the following window opens, where you can enter:

- ❖ *Airport* (IATA code)
- ❖ *Date & Time*
- ❖ *Carrier(s)* (Several comma separated carriers may be defined)
- ❖ *Aircraft Subtype(s)* (Several comma separated values may be given)
- ❖ *Service Type* (the option extends the selection criteria to include maintenance events in the result set)
- ❖ *Query Type* (query against actual times taking delays into account for leg selection.)

Buttons

- Find* – Executes the turnarounds query according to the given conditions.
- Reset* – Clears the contents of the input conditions.
- Print* – Print the turnaround list according to your current printer setting.

In case of a successful search the list of the found turnarounds legs will be displayed:

Turnarounds

Links:

The list can be sorted by each column by clicking on the column name.

By clicking on the flight link (column name: FLIGHT) all the attributes of the selected leg will be displayed.

By clicking on an airport link (column name: FROM or TO) all the attributes of the selected airport will be displayed

By clicking on the registration link (column name: REG.) all the attributes of the selected aircraft will be displayed.

8. NetLine OpsLink Legs

After selecting legs and logging in, the following window opens, where you can enter:

- ❖ *Carrier(s)* (Several comma separated carriers may be defined)
- ❖ *Flight Number(s)* (Several comma separated numbers or number intervals may be defined)
- ❖ *Departure Airports* (IATA code)
- ❖ *Arrival Airports* (IATA code)
- ❖ *Aircraft Subtype(s)* (Several comma separated values may be given)
- ❖ *Registration(s)* (A/C Registration. Several comma separated values may be defined)
- ❖ *Departure Date From* (Arrival/Departure date and time for the legs)
- ❖ *Departure Date To* (Arrival/Departure date and time for the legs)
- ❖ *Service Type* (the option extends the selection criteria to include maintenance events in the result set)
- ❖ *Query Type* (query against actual times taking delays into account for leg selection.)

In case of a successful search the list of the found legs will be displayed:

The list can be sorted by each column by clicking on the column name. The default sort order can be configured by your system administrator.

By clicking on a service type (column name: ST) the description of the selected service type will be displayed in the user information dialog.

By clicking on a state (column name: STATE) the description of the selected leg state will be displayed in the user information dialog.

By clicking on an airport link (column name: FROM or TO) all the attributes of the selected airport will be displayed.

By clicking on a registration link (column name: REG.) all the attributes of the selected aircraft will be displayed.

By clicking on a delay link (column name: DELAY) the description of the selected delay will be displayed in a user information dialog.

By clicking on a flight link (column name: FLIGHT) all the attributes of the selected leg will be displayed.

9. NetLine OpsLink Leg Details

Leg Details will be activated by clicking on a FLIGHT link anywhere in the OpsLink application:

10. NetLine OpsLink Movements

Fields:

- ✓ CARRIER – Airline designator of the flight carrier.
- ✓ FLIGHT NUMBER – Flight number of the flight. Only numeric input is allowed.
- ✓ SUFFIX – Operational suffix. Can be left empty if the flight does not have a suffix.
- ✓ DAY OF ORIGIN – DOO.
- ✓ AIRPORT – Departure or arrival airport. Select the appropriate check box on the right of the airport field.

Input Tabs:

Initially activated tab corresponds to the state of the selected leg.

The following criteria apply:

- **Departure:** if the selected leg is not yet off-block.
- **Delayed TO:** (delayed take-off) if the selected leg is off-block but not yet airborne.
- **Arrival:** otherwise.

Auto calculate delay duration

The movement entry forms for delay and departure messages preset the first empty delay time duration field with the difference between scheduled departure time and actual departure time less delay time durations in previous fields. The calculation is done only if the delay time was not saved previously.

Example:

STD 0800 – ATD 0807

Action: 1st delay code set.

Result: 1st delay time calculated as 0007

Action: delay manually corrected to 0005 and 2nd delay code set.

Result: 2nd delay time calculated as 0002.

Common Input Fields:

The following input fields will be displayed on all movement pages:

- ✓ *TIME MODE* - radio button for defining the type of the input time fields (mandatory). It will be initialized by the setting saved at the last sending of a movement message.
- ✓ *UTC* – the input times will be interpreted as UTC times.
- ✓ *LOCAL TIME* – In Master Time Mode times are interpreted as Master Time Zone. In Local Time Mode times are interpreted as local times of the respective event location.
- ✓ *CORRECTION* - check this checkbox if the message must be sent as a correction message (optional).
- ✓ *AIRCRAFT REG* - A/C registration. For non-rotational subfleets this field is always editable otherwise it is only editable if the leg is not yet tail assigned.
- ✓ *SI* - Supplementary Information (optional). Max. 169 characters. Allowed characters are: letters, digits, space, slash, hyphen and dot. SI entry is not possible when the storage for incoming remarks in Ops is exhausted

a. Movements Delay messages

The „Delay Message” will be activated by clicking on the tab Delay. It provides the input for a MVT “Delay Message”

The following input fields are specified for this message additionally:

- ✓ *DELAY TYPE* - the type of the delay information (mandatory).
- ✓ *ED* – Estimated Departure (default).
- ✓ *NI* – Next Information.
- ✓ *ESTIMATED DEPARTURE* - Estimated departure time in format DD HHMM

- ✓ *DELAY CODE* (1-4) - drop down lists containing the delay codes (min. one delay code is mandatory if the leg delays).
- ✓ *SUB DELAY CODE* (1-4) - drop down lists containing the sub delay codes (optional).

b. Movements Delayed TO messages

The „Delayed Takeoff Message” will be activated by clicking on the tab Delayed TO. It provides the input form to send a MVT “Delayed Takeoff Message””

The following input fields are specified for this message additionally:

- ✓ *OFF-BLOCK* - Off-block time in format DD HHMM
- ✓ *ESTIMATED TAKE-OFF* - Estimated take-off time in format DD HHMM
- ✓ *ESTIMATED ARRIVAL* - Estimated arrival time (estimated landing time) in format HHMM
- ✓ *ARRIVAL AIRPORT* - IATA code of the arrival airport
- ✓ *DELAY CODE* (1-4) - drop down lists containing the delay codes (at least one delay code is mandatory if the leg is delayed)
- ✓ *SUB DELAY CODE* (1-4) - drop down lists containing the sub delay codes (optional).
- ✓ *DELAY TIME* (1-4) - Delay time in format HHMM

i. Movements Diversion

The „Diversion Message” is activated by clicking on the tab Diversion. It provides an input form for a “Diversion Message”:

The following input fields are specified for this message additionally:

- ✓ *ESTIMATED ARRIVAL* - Estimated arrival time in format HHMM
- ✓ *REASON* – Code identifying the diversion reason
- ✓ *SI* – Field for entering supplementary information

11. NetLine OpsLink Checks

By inserting the data in the checks window you get the list of checks scheduled for a specific airport, or the list of a type of check, the result depends on the data requested. By clicking on the highlighted check you get the detail:

- ❖ *Airport* (IATA code)
- ❖ *Date From* (Scheduled time for the checks in format DDMONYYHHMM)
- ❖ *Date To* (Scheduled time for the checks in format DDMONYYHHMM)
- ❖ *Subtype(s)* (Several comma separated values may be given)
- ❖ *Check Code* (Check code to be searched for)

Buttons

- Find* – Executes the Checks query according to the given conditions.
- Reset* – Clears the contents of the input conditions.
- Print* – Print the Check list according to your current printer setting.

In case of a successful search the list of the found check will be displayed. If only one matching check is found it will be displayed directly in “Check Details”. Check Details” will be activated by clicking on a CODE link on the site „List Checks” or by clicking on a FLIGHT link on the sites „List Legs”, “List Arrivals”, “List Departures”, “List Turnarounds” or if searching a check returns only one check:

13. NetLine OpsLink Aircraft

By entering the aircraft registration, opslink returns all information relating to the aircraft concerned. One or more aircraft can be searched by using the following conditions :

- ❖ *Registration* (Registration of the aircraft)
- ❖ *Subtype(s)* (of the aircraft)
- ❖ *Valid At* (Effective date for the aircraft in the format DDMONYY)

Aircraft

Registration	<input type="text"/>	
Subtype(s)	<input type="text" value="319"/>	<input style="width: 40px; height: 20px; border: 1px solid #ccc; border-radius: 5px; padding: 2px 10px; margin-right: 10px;" type="button" value="Find"/> <input style="width: 40px; height: 20px; border: 1px solid #ccc; border-radius: 5px; padding: 2px 10px;" type="button" value="Reset"/>
Valid at (UTC)	<input type="text" value="05Jan22"/> (DDMMYY)

14. NetLine OpsLink preferences

Use this page to configure user specific preferences.

Preferences

Master Time Zone:

Airport time mode: Master Local

Print Mode: Graphical (e.g. Laser Print) Text only

- ✓ *MASTER TIME ZONE* – A drop-down list containing all time zones including UTC in alphabetical order. UTC and the time zone reported by the location of the web browser are listed first. Time zones are identified by an airport code and the UTC offset.
- ✓ *AIRPORT TIME MODE* – In Master Time Mode all leg times are shown in the MASTER TIME ZONE. In Local Time Mode all leg times are shown in the time zone of the corresponding airport.
- ✓ *PRINT MODE* – Each result list in OpsLink can be printed in three different ways:
 - a. The graphical printout uses the printing capabilities of your operating system and requires a page printer (e.g. Laser, Inkjet etc.)
 - b. The text printout uses the printing capabilities of your operating system and supports character printers (dot matrix printers)
 - c. TTY printers do not require local printing capabilities and send the output to a telex address. (dot matrix printers attached as telex printers)
