 SUBJECT : LOCKING PIN-ELECTRICAL BOX INSTALLATION

Locking Pin located on Electrical Box with part number D23119751 & D23119751-1 has been installed on each A320 aircraft operated by Pegasus. This locking pin is used before towing operation to power-off the Nose Landing Gear hydraulic using by fixing the lever into towing position. After towing, the lever is set back to normal position. The lever has a loaded spring to force the locking pin into its original position on the Electrical Box when the pin is set free. In several cases, this Locking Pin has been found damaged or missing on the Electrical Box, leading to Electrical Box replacement and subsequent maintenance costs.

We would like to have your valuable efforts and pay special attention for setting the lever of the electrical box by using the locking pin into towing position and normal position slowly to avoid physical damage on the locking pin on A320 type aircraft.
