Dear Ground Service Providers,

We would like to inform you about a recent incident that occurred during the loading of a Dangerous Goods item, specifically an RRY barrel, **which serves as a critical reminder of the importance of adhering to safety procedures:**

During the loading process via the conveyor belt, the RRY barrel tipped over the edge and struck the edge of the cargo hold. This resulted in a significant dent in the barrel, though, fortunately, there was no spillage of the contents.

As you are aware, the transportation of Dangerous Goods involves inherent risks, and it is paramount that these risks are minimized through strict adherence to established safety procedures.

Therefore, **please take meticulous care when handling and loading Dangerous Goods**, particularly in ensuring that such items are properly secured at all times.

Please ensure that:

1. **Proper Securing:** All Dangerous Goods are securely fastened and positioned during the loading process to prevent any movement or tipping.
2. **Handling Procedures:** Follow all prescribed handling procedures specific to Dangerous Goods, including using appropriate equipment and maintaining constant vigilance.
3. **Immediate Reporting:** Any irregularities or incidents, no matter how minor, must be reported immediately to the relevant supervisors and safety personnel to ensure prompt action can be taken.

Thank you for your cooperation and attention to this matter.

Best regards,
Ground Operations Bureau
