

DHS NEWSPAPER

WEEKLY 23

STATION: FRA

EU LISA? EES?

GoNow has been updated with the functionality to check entry and exit authorization to and from the EU. On non-Schengen flights, document verification remains a requirement. If you encounter an error, you must not override without supervisor approval. First forward a picture of the error message to the supervisor on duty and they will troubleshoot the error. Only when entry/exit requirements are met may the supervisor override the error by following the guide uploaded in AvBIS.

LRT

On Pegasus flights, limited release tags must be used for all non-standard luggage. For example, if someone checks in an IKEA bag, it must be entered into the system as an LRT. The same is true for all baby strollers and car seats. This should always be done through the system so that it will both be recorded digitally and also print onto the tag itself. Remember, if it's not a typical piece of travel luggage, LRT.

Add Bag Tag				**Add Manual Bag Tag			
Explanation		Explanation		Explanation		Explanation	
Pieces/Weight/DBag/LRT	1 / 12 / <input checked="" type="checkbox"/>	Pieces/Weight/DBag/LRT	/ / <input type="checkbox"/>	**Barcode Read / Free Of Charge

1.DBag/LRT							
**Add Ssr Bag				**Add Ssr Bag			
SSR Baggage Type	**SSR Baggage Count / SSR Baggage Weight	**Damaged Bag Area	**Damaged Bag Rate	**LRT			
BCAR	1 / 5			**Fragile or Ina...			

Accurate Weight

While it might be okay to lie about our weight in a dating app, it is not okay to put the incorrect baggage weight into the system. Weight and balance is a key factor in aviation safety. Inputting the incorrect weight into the could result in the aircraft being out of trim. Which may have potentially fatal consequences.
