Topic: Walkaround

Dear All,

Currently, an A/C took off from FRA, but the safety pins were still inserted. The A/C had to return to position from airborne. The landing gear could not be retracted. It caused a huge safety issue and delay.

Always conduct your walkarounds with 100% of your attention. Follow our walkaround procedures and make sure, you checked the whole A/C according to the Walkaround sheet.

- After every walkaround: write down your findings, inform Captain if needed, sign walkaround.
- **Make sure, all safety pins are disconnected!**

In case, you spot something any damage or defect - No matter how small – must be reported immediately.

BE AWARE, TAKE CARE!!
