## Emergency Button on Position

Dear all,

We have on every position an emergency button. Example Pictures:

After the FOD check was performed and the position "cleared" for the arrival of the A/C some vehicle or object could still block the position afterwards.

In this situation we have to use the emergency button as quick as possible to reset the position to "unclear to enter" – it will be shown on the screen: **STOP**
The Airport (Vorfeldaufsicht) will be informed directly and they will send an "Romeo" (Marshaller) as well to the position for a check-up.
