Topic: TUI FIDs Setup

Dear all,

Below you will see examples of how to set up the flight information displays for TUI flights.
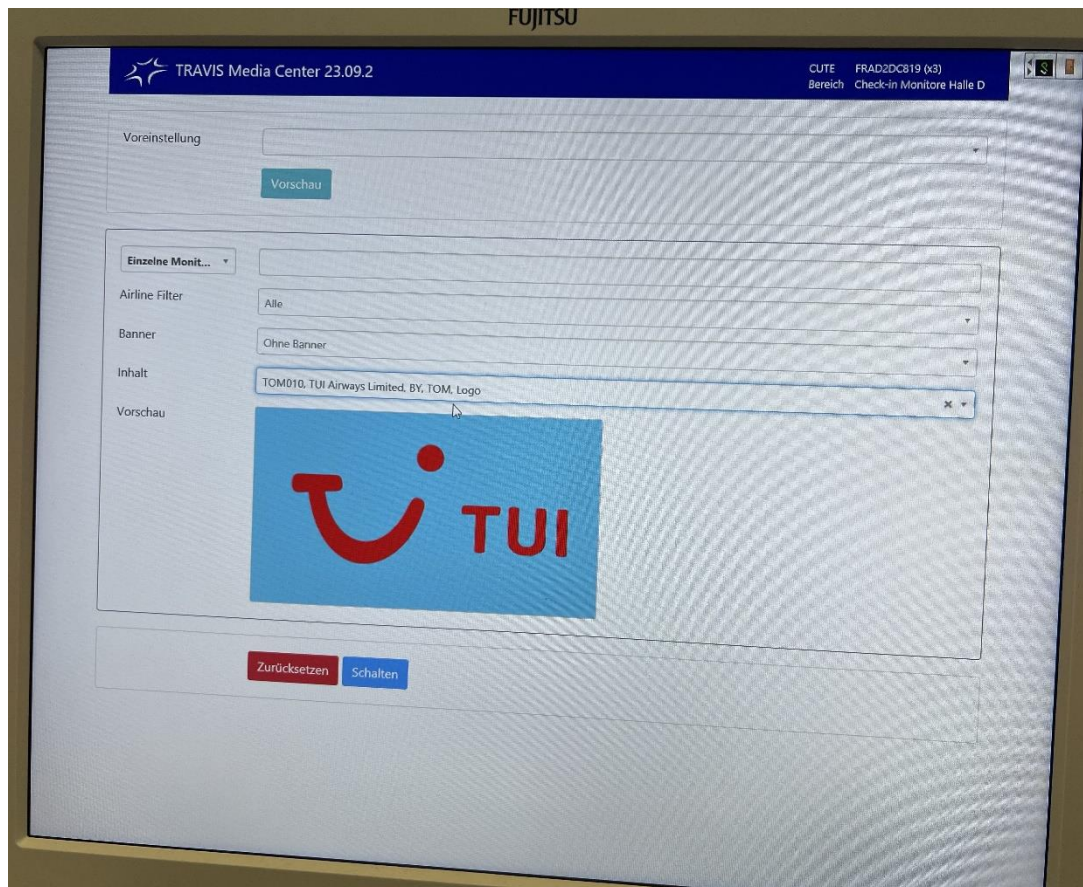

For scheduled TUI flights the standard is two counters, one should have the TUI banner across the top with the flight number and destination (not the 3 letter code).

The second counter should have the DGR screen (FAG050) as seen below:

On charter flights there should only be the full screen TUI logo without the flight number as seen below.

In addition to the full screen TUI logo, the same DGR should be used alternating counters.

For example, if there are five counters it should appear to the passengers:

TUI / DGR / TUI / DGR / TUI
