

Topic: LOT EDT MVT and TOBT and RUSHBAGS

Hello all,

again an important update from LOT:

1. Minimum Ground Times:
 - E170 / E175 – 40min / 45min
 - E190 / E195 – 45min / 50min
 - B737 – 55min / 60min
2.
 - **MVT from WAW - expected delay from WAW:**
send ETD messages with the time corrected for the planned arrival from WAW, **do not correct the TOBT yet**
 - **confirmed departure - ATD MVT message from WAW:**
OCC assess the planned ETA and, if necessary, correct the MVT messages on departure from FRA and at this point **adjust the TOBT/EOBT for the first time**
 - **the A/C is on block, ATA data:**
calculate time required for pax/ramp handling in accordance with the MGT and about 10 minutes after ATA: update TOBT /MVT ETD if correction needed
 - third TOBT update 10-5 minutes to ETD/ TOBT
3. **Attention BO:** in case of any Delay, please communicate it to Passage SV and call ACDM to change FIDS ☺
4. **RUSH BAGS:** We receive a forward message for every single rush bag. You always have to check these forward messages. Especially for LO382, there are always many expected rush bags.
If you have more than 10 rush bags expected. Please inform the TRC so he can get in touch with CLC to include the rush bags already in the LIR and there will be no delays for that reason.

Thank you!

Laura
